hospitals**

XIAMEN-FUPOND INTERNATIONAL HOSPITAL Xiamen, China

Project scope: Xiamen University is developing a new 500-bed general medical/surgical hospital to be located on its campus. The Xiamen University-FuPond International Hospital is being planned to offer state-of-the-art general medical and surgical care, featuring signature programs in cardiovascular care and oncology. It will also serve as the teaching affiliate of the Xiamen University Medical School.

Collaboration with PHMI: PHMI played a major role in the hospital's early-stage design and development, including the creation of the clinical program and conceptual design for each department. PHMI has worked closely with leadership at Xiamen and with the architectural firm assigned to carry forward the design, providing assistance in outlining necessary equipment, staff support, and other essential components of the hospital's development.
